Shopify Plus Integration

Integrating Shopify Plus with business software

In association with:

By integrating Shopify Plus with your business software you will eradicate repetitive employee data entry, remove the risk of costly errors and significantly decrease order fulfilment times. What are you waiting for? eCommerce doesn't have to be painful.

The Problem

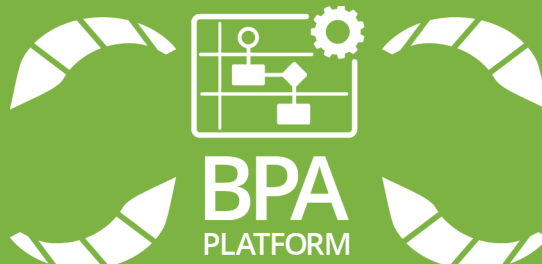

Shopify Plus is a powerful eCommerce platform that enables you to create your own successful online shop. However, once created it still needs people to manage the data generated by Shopify Plus and rekey that information into business software. Employees also extract data from business software and rekey that into Shopify Plus. This takes time, is error prone and is an unnecessary cost.

The Solution & Commercial Benefits

Codeless Platforms' Shopify Plus Integration Connector automates the flow of information between Shopify Plus and your business software.

- Improved customer buying experience
- Eradicate repetitive data entry activities and associated errors
- Improve employee productivity
- Significantly reduce order fulfilment times
- Enhance levels of customer service

Managing customer accounts and automating order management

Customer accounts (details, billing/shipping address) can be automatically created and updated in an accounting, CRM or ERP system from sales orders received via Shopify Plus including new accounts, guest accounts or existing accounts.

Once a customer has checked out with a valid payment transaction, orders can be automatically downloaded and imported into any accounting, CRM or ERP system, and include key information such as product description, product code and quantity required, customer billing / shipping details, delivery method (including carriage charges) and method of payment.

Automating inventory, pricing and product updates

When changes in inventory are identified in your accounting, CRM or ERP system by the Shopify Plus Integration Connector it can update the inventory levels on the web shop every 15 minutes. Retail price changes can be automatically updated in Shopify Plus on an hourly basis.

Product synchronisation can be performed daily out of normal working hours to make sure all product details are up to date in Shopify Plus and any new products are uploaded when added to your accounting, CRM or ERP system. When a product is unavailable it will be obscured on the web shop. Product SKU, description, tax class, weight, retail price and on hand inventory quantity are uploaded.

Integrating Shopify Plus with courier services

When all orders have been transferred from Shopify Plus into your accounting, CRM or ERP system, you are now faced with the task of placing them with your preferred courier service. More costly administration for you and your employees.

Our solution will automatically take orders from your business software and place them with your courier service provider. The Shopify Plus Integration Connector can easily integrate the majority of courier services including DHL, DPD, FedEx, Hermes, interlink Express, Parcelforce, TNT and UPS. It will also automatically print the labels out for your dispatch team to process if required.
